# Arctic Alaska Chukchi and Beaufort Seas Offshore Environmental Sensitivity Index Maps

## A Guide to Marine Resources at Risk to Spilled Oil

### INTRODUCTION

Environmental Sensitivity Index (ESI) maps have been developed for federal waters of the Arctic Alaska - Chukchi and Beaufort Seas.

The ESI atlas is a compilation of information on sensitive biological resources. Though the data will be useful for many natural resource applications, the goal of the ESI data is to present a concise summary of resources that may be particularly vulnerable to spilled oil. The intent of the data should caveat other uses. As an example, the ESI is not intended to present a catalog or comprehensive listing of species present in an area, rather the focus is on species and/or life stages particularly sensitive to oiling.

### SENSITIVE BIOLOGICAL RESOURCES

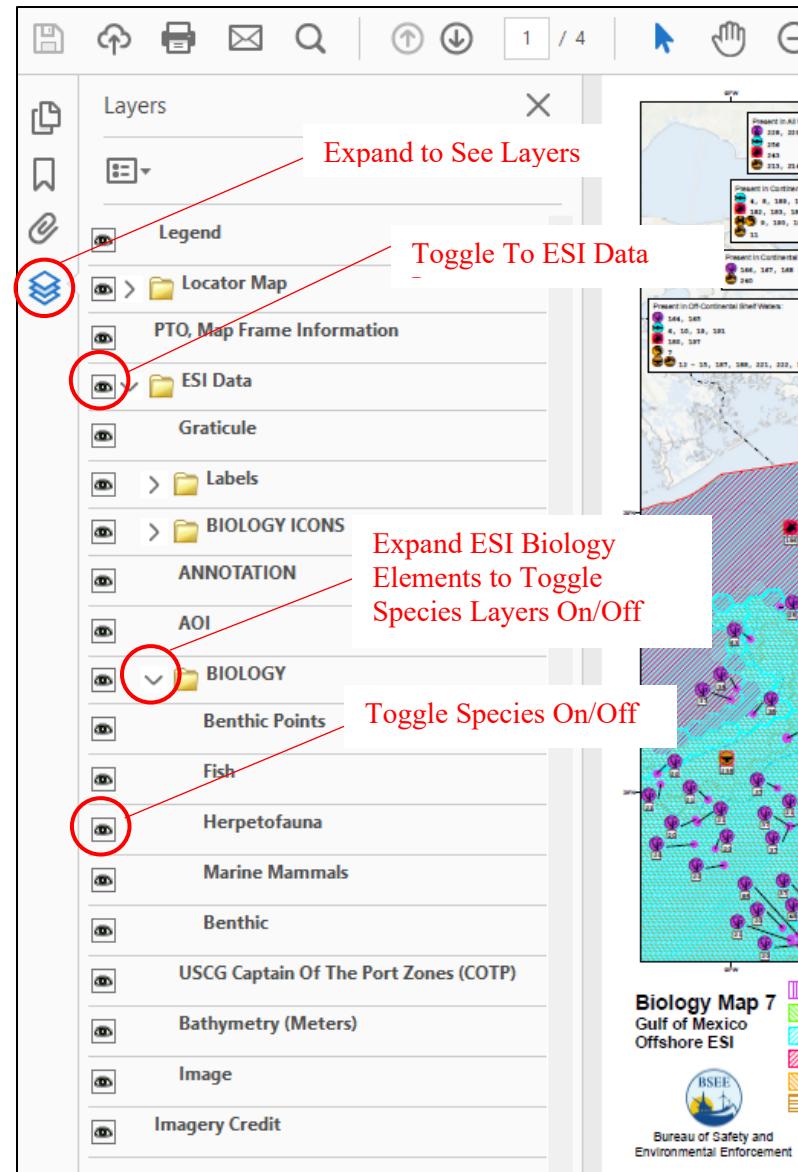

Biological information presented in this atlas was collected, compiled, and reviewed with the assistance of biologists and resource managers from the following agencies:

- Alaska Ocean Observing System (AOOS)
- Audubon Alaska
- Duke University, Marine Geospatial Ecology Lab
- Duke University, Nicholas School of the Environment
- NOAA Deep Sea Coral Research and Technology Program (DSCRTP)
- NOAA Fisheries (National Marine Fisheries Service (NMFS))
- NOAA Fisheries, Alaska Fisheries Science Center, Marine Mammal Laboratory, Cetacean Assessment and Ecology Program
- NOAA NMFS Alaska Regional Office
- Sea Duck Joint Venture
- United States Fish and Wildlife Service (USFWS)
- USFWS, Marine Mammals Management, Region 7
- United States Geological Survey (USGS) Alaska Science Center
- University of Texas
- University of Washington, Cooperative Institute for Climate, Ocean, and Ecosystem Studies (CICOES)
- University of Washington, School of Fisheries and Aquatic Sciences

The above organizations provided much of the biological information included in the atlas. Other participating organizations are featured in the sources table and cited in the metadata accompanying the digital product.

The biological resources shown in this atlas were extracted from the ESI GIS data compiled for this region. The biological resources shown on these maps are "layered" in the PDF maps. This allows the user to turn on or off the biological features to create thematic maps or to see more clearly overlapping polygons. Narrative species/taxa profiles that include range maps made from the ESI data accompany this atlas. The range maps in the profiles are layered PDF files, which allow the user to turn on or off selected data layers.

### General Instructions on Using Layered PDF

### Key Features On ESI Maps

- 1) Animal and plant species that are at risk during oil spills and/ or spill response are represented in the database by polygons and points.
- 2) Species have been divided into groups and subgroups based on their behavior, morphology, taxonomic classification, and spill vulnerability and sensitivity. The icons below reflect this grouping scheme.
- 3) There is a Resources at Risk number (RAR#) associated with each polygonal or point feature. The RAR# references a table in the database that contains species names (common and scientific) associated with the feature.

#### BIRD

-  Diving Bird
-  Gull/Tern/Bird
-  Pelagic
-  Shorebird
-  Waterfowl

#### MARINE MAMMALS

-  Pinniped
-  Polar Bear
-  Whale

#### FISH

-  Fish
-  INVERTEBRATE
-  Crab/Invertebrate
-  Gastropod
-  BENTHIC
-  Algae/Coral/Reef
-  Kelp

- 4) Also associated with each species in the table is the federal (F) protected status as threatened (T) or endangered (E) under the Endangered Species Act (ESA) represented on the maps as a red box around the subelement icon shown above, as well as concentration, seasonality, and life-history information. Federal listings were provided by NMFS and USFWS.
- 5) The table includes a Mapping Qualifier with each species record (see table of mapping qualifiers and guidelines below). The mapping qualifier should help users understand vulnerabilities associated with the map data.
- 6) Feature-level source information is included for each species within each RAR#, meaning there is a link to a table containing Geographic (G) and Seasonality (S) sources. Full bibliographic information is included for each source in the sources table.

Additionally, feature information is included in the GIS database used to create these maps. The GIS data also provide the extent polygons or points for all mapped features; it can be queried, filtered, and used with other GIS datasets.

- 7) The text in the Present Throughout Box (PTO) describes how the general geographic location is determined for the PTO boxes displayed on the ESI maps. The individual species status (threatened/endangered) is the primary filtering criteria for determining what is displayed on the maps versus what is put in the PTO box. Not every species with a status will be shown on the map and may be shown in the PTO box. Additional filtering for PTO includes the spatial extent of the species or species assemblage polygons relative to the area displayed on each map. The purpose of the PTO box is to declutter the map and increase readability.

#### Mapping Qualifiers and Guidelines

Element	Qualifier	Guidelines
Benthic	Concentration Area	Areas where concentrations are considerably higher than other records of the same species in the AOI. Completion of the concentration field is mandatory for records with this qualifier.
Bird	Concentration Area	Areas where concentrations are considerably higher than other records of the same species in the AOI. Completion of the concentration field is mandatory for records with this qualifier. May be used when other qualifiers do not apply. May indicate concentrations for foraging or other activities not covered by other qualifiers.
Invert	Concentration Area	Areas where concentrations are considerably higher than other records of the same species in the AOI. Completion of the concentration field is mandatory for records with this qualifier.
M_Mammal	Concentration Area	Areas where concentrations are considerably higher than other records of the same species in the AOI. Completion of the concentration field is mandatory for records with this qualifier.
Bird	General Distribution	Used for broad, general distributions of species that are often mapped to landscape- or habitat-scale features (e.g., bays or marshes); may or may not include specific life history information.
Fish	General Distribution	Used for broad, general distributions of species that are often mapped to landscape- or habitat-scale features (e.g., bays or marshes). May or may not include specific life history information.
Invert	General Distribution	Used for broad, general distributions of species that are often mapped to landscape- or habitat-scale features (e.g., bays or marshes); may or may not include specific life history information.
M_Mammal	General Distribution	Used for broad, general distributions of species that are often mapped to landscape- or habitat-scale features (e.g., bays or marshes); may or may not include specific life history information.
M_Mammal	Migration	Potential or known mammal migration corridors in the marine environment.

Element	Qualifier	Guidelines
Bird	Rafting	Similar to 'Concentration Area' qualifier, but specific to large, on-water concentrations.
Benthic	Vulnerable Occurrence	Intended for records of rare species with discrete occurrences, where the conservation value of the species should be highlighted for spill response. Can also be used for T/E records that are not mapped as a general distribution of the species.
M_Mammal	Vulnerable Occurrence	Intended for records of rare species with discrete occurrences, where the conservation value of the species should be highlighted for spill response. Can also be used for T/E records that lack discrete life history information or for T/E records that are not mapped as a general distribution of the species.

#### Present Throughout Box (PTO)

PTO Designation	Description
Present In All Water	Species or species assemblage polygons that cover most if not all water in the AOI for a map.

#### Birds

Birds displayed in this atlas include alcids, diving birds, gulls, terns, pelagic birds, shorebirds, and waterfowl. Species that are conservation priority are specifically emphasized, including two ESA-listed species: spectacled eider (FT) and Steller's eider (FT). Bird occurrence information displayed in this atlas is based on information gathered via phone/email correspondence with resource experts, and hardcopy and digital sources; key data sets are listed below and included in the metadata. This atlas represents offshore waters, so while no birds are technically nesting within the AOI, several species are nesting on land and on islands in proximity to the AOI. Therefore, some nesting seasonalities are included to highlight this critical life-history stage where appropriate.

*North Pacific Pelagic Seabird Database (NPPSD):* For general distribution coverage of seabirds in the AOI, data from the NPPSD were used. The NPPSD is a USGS-maintained database that contains point locations of survey transect data that censused seabirds at sea. NPPSD records were clipped to the Arctic AOI, and species frequencies from 2000 to present within the AOI were computed. Seabird species with frequencies in the 10s or greater were included in the ESI, with concentration values listed by order of magnitude of record frequency (e.g., "10s", "100s", "1000s", or "10,000s").

*Sea Duck Key Habitats Atlas:* This atlas describes sites throughout North America that constitute important sea duck habitats. Criteria for inclusion in this atlas were strict, to highlight those habitats most critical to sea ducks during at least one season. Two sites fell within the Arctic Alaska - Chukchi and Beaufort Seas AOI: the Ledyard Bay site and offshore portions of the Beaufort Sea Coastal Lagoons site (most of which falls inshore of the AOI). Ledyard Bay includes near- and offshore coastal waters between Cape Lisburne and Icy Cape on the Arctic coast of Alaska. This remote marine site on the eastern edge of the Chukchi Sea provides shallow (<30 m) water staging and molting habitat for a variety of sea duck species. The coastal waters of Ledyard Bay provide critical staging habitat for all four eider species, including important staging and molting habitat for spectacled eiders (FT) breeding on the Arctic coastal plain of Alaska. The Beaufort Sea Coastal Lagoons habitat site encompasses a narrow strip of Alaska's Arctic coastline from Icy Cape on the Chukchi Sea eastward along the Beaufort Sea to the Canadian border. This site provides important habitat for molting sea ducks, particularly long-tailed ducks.

*Audubon Important Bird Areas:* The Important Bird Area (IBA) Program is a global effort to identify and conserve areas that are essential habitat for birds at global, continental, and state scales. Alaska IBAs are relied on for breeding, nesting, foraging, molting, resting, staging, and/or migration. Alaska IBAs that fell within the Arctic Alaska - Chukchi and Beaufort Seas AOI include: Lisburne Peninsula Marine, Ledyard Bay to Icy Cape, Chukchi Sea Nearshore, Barrow Canyon and Smith Bay, Beaufort Sea Shelf Edge, and Beaufort Sea Nearshore.

Note that species composition within polygons and particularly concentration values are based on model or other results using observations made over multi-year periods and are not meant to accurately reflect 'current' conditions in the case of an event. Survey and modelling limitations, weather, and other ecological factors contribute to bird concentrations at any given time. Also, note that bird concentrations vary throughout the periods listed in the seasonality table. Please contact resource experts in the event of a spill or if data are to be used for any reason other than spill planning or response.

#### Expert contacts for Arctic (Chukchi and Beaufort Seas) birds\* are:

Name	Agency	City	Phone/ Email	Species
Mayumi Arimitsu	USGS	Juneau, AK	marimitsu@usgs.gov; (907) 364-1593	Seabirds

Drew, G.S., S.K. Schoen, M.D. Hood, M.L. Arimitsu, and J.F. Piatt. 2005. North Pacific Pelagic Seabird Database (NPPSD) (ver 4.1, May 2023): U.S. Geological Survey data release, <https://doi.org/10.5066/F7WQ01T3>.

Sea Duck Joint Venture. 2022. Atlas of Sea Duck Key Habitat Sites in North America, vector digital data.

#### Fish

Fish species depicted in this atlas include species of conservation interest, and species of commercial, recreational, or ecological importance. Fish polygons were created based on digital data, publications, and expert opinion provided by resource experts at NOAA Fisheries and others.

Commercially important species were mapped based on Essential Fish Habitat (EFH) descriptions and supplemented with information from fish surveys and reports. Forage species were mapped using spatial data generated for the Ecological Atlas of the Bering Chukchi, and Beaufort Seas (Audubon Alaska, 2017).

#### Expert Contacts for Arctic (Chukchi and Beaufort Seas) fish\* are:

Name	Agency	City	Phone/ Email	Species
Libby Logerwell	NOAA Fisheries	Seattle, WA	Libby.logerwell@noaa.gov	Fish

Audubon Alaska. 2017. Ecological Atlas of the Bering Chukchi, and Beaufort Seas, 2<sup>nd</sup> Edition, vector digital data.

Logerwell, E., M. Busby, C. Carothers et. al. 2015. Fish communities across a spectrum of habitats in the western Beaufort and Chukchi Sea. Progress in Oceanography. 136: 115-132.

Marsh, J.M. and F.J. Mueter. 2023. AOOS Chukchi Sea Fish Survey Database, tabular digital data.

NOAA. 2018. Alaska Essential Fish Habitat Species Shapefiles, vector digital data.

#### Invertebrates

Invertebrates depicted in this atlas include species of conservation interest, or species of commercial, recreational, or ecological importance. Snow crab is the only commercially harvested species

present in the AOI and was mapped to its EFH. Areas identified as concentration areas for crustaceans were included in the atlas, due to their importance as prey for marine mammals and birds. Invertebrate taxa present in the Boulder Patch community were also mapped to the spatial extent of the Boulder Patch provided by the University of Texas (also see Benthic Habitats section).

#### Expert Contacts for Arctic (Chukchi and Beaufort Seas) invertebrates\* are:

NOAA. 2018. Alaska Essential Fish Habitat Species Shapefiles, vector digital data.

#### Marine Mammals

Marine mammals mapped in the atlas include cetaceans, pinnipeds, and polar bear that are ESA-listed and/or MMPA-listed. Marine mammal occurrence information displayed in this atlas is based on information gathered via phone/email correspondence with resource experts, hardcopy, and digital sources; key data sets are listed below and included in the metadata.

*Polar bear:* Polar bears (FT) occur throughout the circumpolar Arctic, primarily above the Arctic Circle. Polar bear distribution shifts in association with the Arctic ice pack, contracting and moving north in the summer and expanding to the south in the winter. Polar bear distribution was mapped using the USFWS 'proposed designated no disturbance zone' which is part of the barrier island critical habitat for the Southern Beaufort Sea and the Chukchi/Bering Sea polar bear populations in Alaska, which encompasses most of the project AOI.

*Pinnipeds:* Species mapped in this atlas include Arctic ringed seal (FT), bearded seal (FT), and Pacific walrus.

*Pacific Walrus:* Pacific walrus range across the continental shelf waters of the Bering and Chukchi seas. Distributions and habitat use patterns vary markedly in response to seasonal and annual variations in sea-ice cover. In April and May, most adult females and juveniles migrate northward to summer feeding areas in the Chukchi Sea. In June through August, walruses occupy broken sea-ice habitats along the northwestern coast of Alaska. Walruses typically migrate from the Chukchi Sea to the Bering Sea from October to December. USFWS provided walrus seasonal range maps shapefiles that represent the 'summer' (May – October) range for walruses. The summer range extends along the coast of Alaska from Unimak Island to Point Barrow. The northern extent of the summer range is the 100-meter (m) depth contour. Most walruses travel <70 km from land and sea ice to forage, and most walruses forage at depths <100 m. The seasonal range shapefiles were verified with datasets containing recent walrus observations to ensure the shapefiles accurately represented the current seasonal ranges. Also mapped in this atlas is the Hanna Shoal Walrus Use Area; polygonal data were provided by USFWS. On Hanna Shoal, warm water diverts around a 10 m hill on the seafloor, allowing the sea ice to persist into September and attract walruses.

*Arctic ringed seal (FT) and bearded seal (FT):* NMFS provided polygonal data for the bearded seal Beringia distinct population segment and arctic ringed seal distribution. Bearded seals are closely associated with sea ice and their seasonal movements are generally related to sea ice advance and retreat. During winter and spring, bearded seals in Alaska are widely distributed in the broken, drifting pack ice ranging from the Chukchi Sea south to the ice front in the Bering Sea. As the ice retreats in mid-April through June, most adults are thought to move into the Chukchi and Beaufort seas where they spend the summer and early fall near the wide, fragmented margin of multiyear ice. Throughout their range, ringed seals have an affinity for ice-covered waters and are well adapted to both shorefast and pack ice throughout the fall, winter, and spring. Critical Habitat

designated for the Arctic ringed seal includes an area of marine habitat in the northern Bering, Chukchi, and Beaufort seas.

**Whales:** Species mapped in this atlas include beluga whale, bowhead whale (FE), fin whale (FE), gray whale, humpback whale, and minke whale. Biologically Important Areas (BIAs) data were provided by NOAA and Duke University for the Arctic Region and the Aleutian Islands and Bering Sea Region, both of which partially fell within the AOI for this atlas. The following text has been adapted from Brower et al. (2022) and Clarke et al. (2023). BIAs are compilations of the best available science and have no inherent regulatory authority. They have been used by NOAA, other federal agencies, and the public to support marine spatial planning and marine mammal impact assessments, and to inform the development of conservation measures for cetaceans. Supporting evidence for Arctic BIA II came from data derived from aerial-, land-, and vessel-based surveys; satellite telemetry; passive acoustic monitoring; Indigenous knowledge; photo-identification; aboriginal subsistence harvests, including catch and sighting locations and stomach contents; and prey studies. BIAs were identified for bowhead, gray, humpback, fin, beluga, and minke whales.

**Bowhead whale:** Bering-Chukchi-Beaufort (BCB) bowhead whales are migratory, ranging from subarctic to Arctic waters. Most of the stock migrates annually in spring (April-May) past the western side of St. Lawrence Island, through the Bering Strait and northeast through the eastern Chukchi Sea, traveling through nearshore leads that develop each year. The migration route turns east near Point Barrow, where it crosses the Beaufort Sea in continental slope and Canadian basin waters. Bowhead whales migrate west annually in fall (August-September) in the western Beaufort Sea. Bowhead whale polygons with concentration values of MIGRATORY indicate the spatial extent of the migratory route of this species that falls within the atlas AOI. Bowhead whales calve primarily between the beginning of April and the end of May (in the Bering Sea/outside of the atlas AOI) although calving may occur as late as August. Important areas for newborn calves have been described near Wainwright and Utqiagvik from Indigenous knowledge. The most extensive dataset of bowhead whale calf observations was from Aerial Surveys of Arctic Marine Mammals (ASAMM) for the periods July-August 2012-2019 and September-October 2000-2019 in the western Beaufort Sea. Bowhead whale polygons with concentration values of REPRODUCTIVE indicate the spatial extent of the whale calf observations of this species that fall within the atlas AOI. Temporally, bowhead whales are present in 'feeding' BIAs in the Arctic region from May-December. Feeding behavior in the western Beaufort Sea is ephemeral and can differ dramatically between years. Most bowhead whales observed in any given year in the western Beaufort Sea were not feeding, however, and were likely migrating.

**Gray whale:** Gray whales of the Eastern North Pacific (ENP) stock migrate each spring from Baja California, Mexico, along the west coast of the U.S. and Canada, across the Gulf of Alaska and into the Bering, Chukchi, and extreme western Beaufort seas. Gray whales remain in the U.S. Arctic throughout summer and early autumn before making a return migration south. The predominant behavior of gray whales in Arctic waters is feeding. The ASAMM project documented gray whale feeding in the eastern Chukchi Sea from summer through autumn (May-November) with moderate variability in feeding locations within these seasons. The main area for gray whale feeding within the AOI was in the northeastern Chukchi Sea within about 120 km of shore from Icy Cape to Point Barrow. Gray whales from the ENP stock calve mainly in the protected lagoons of Baja California from early January through mid-February. Calves migrate north with their mothers the following spring. Gray whale 'reproductive' BIAs were designated for July-October; polygons with concentration values of REPRODUCTIVE indicate the spatial extent of the whale calf observations of this species that fall within the AOI.

**Beluga whale:** The 'feeding' BIA designated for Beaufort Sea belugas in September extends from Canada to Russia. Satellite telemetry data within the core area indicated that foraging was the principal behavior. Movement data were augmented by aerial line transect survey data collected during ASAMM in September 2009-2019 in the western Beaufort and eastern Chukchi seas.

**Humpback and Minke whales:** Humpback whale BIAs in the Arctic are in the southcentral Chukchi Sea. Temporally, humpback whales feed in the Arctic from July-October. A minke whale feeding 'watch list area' BIA occurs in the Chukchi Sea portion of the atlas AOI. "Watch list areas" are areas that experts believe may be BIAs, but currently lack sufficient information to reliably delineate and score.

#### Benthic Habitats

Benthic habitats mapped in the ESI atlas include shallow corals, kelp, red algae, and sponges in the Stefansson Sound Boulder Patch kelp beds, and mesophotic and deep-sea corals and sponges.

**Boulder Patch community:** The Stefansson Sound Boulder Patch kelp beds were mapped using spatial extents provided by the University of Texas. This shallow (4-7 m depth) community contains boulder and cobble substrates that host a diverse epibenthic assemblage of taxa. General names of habitat-forming taxa present were mapped in the Benthic layer (corals, kelp, red algae, and sponges), and general invertebrate taxa present were mapped to the Boulder Patch polygons in the Invertebrates layer.

**Mesophotic and deep-sea corals and sponges:** Deep-sea corals and sponges were mapped using a presence point dataset. NOAA DSCRTT provided the National Database for Deep-Sea Corals and Sponges, a point database that showed known presence of these taxa throughout the Arctic AOI. All records were mapped in the ESI, regardless of age, because these are long-lived organisms that may still be present decades after data collection. Names of coral and sponge taxa in the database were generalized to response-relevant categories (e.g., soft coral, deep sea sponge, sea pens) that were used as the ESI common names. Also, the structural group of each taxon was included in the ESI concentration field as either 'Structure-forming' or 'Solitary'. This designation was made using a crosswalk between taxon name and structural group provided by DSCRTT.

#### GEOGRAPHIC INFORMATION SYSTEM

The entire atlas product is stored in digital form in a Geographic Information System (GIS) as spatial data layers and associated databases. The format for the data varies depending on the type of information or features for which the data are being stored.

Under separate cover is a metadata document that details the data dictionary, processing techniques, data lineage, and other descriptive information for the digital datasets and maps that were used to create this atlas. Below is a brief synopsis of the information contained in the digital version. Refer to the metadata embedded in each feature class in the BSEE Arctic Alaska (Chukchi and Beaufort Seas) ESI geodatabase for a full explanation of the data and its structure.

Biological resources are stored as points and polygons. Associated with each feature is a unique identification number that is linked to a series of data tables that further identify the resources. The main biological resource table consists of a list of species identification numbers for each site, the concentration of each species at each site, a mapping qualifier, and identification codes for seasonality and source information. This data table is linked to other tables that describe the seasonality and life-history time periods for each species (at month resolution) for the specified map feature. Other data tables linked to the first table include: the species identification table, which includes common and scientific names; the species status table, which gives information for federal threatened or endangered listings; and the source database, which provides source metadata at the feature-species level (specific sources are listed for each species occurring at each mapped feature in the biology feature classes).

#### ACKNOWLEDGMENTS

This project was funded by the Bureau of Safety and Environmental Enforcement (BSEE), U.S. Department of the Interior. We want to acknowledge the great support by Bryan Rogers and Steven Pearson (BSEE), Gabrielle McGrath (RPS), and all who assisted greatly in all aspects of the project's completion.

The biological data included on the maps were provided by numerous individuals and agencies. The individuals and agencies are listed in detail throughout the introductory pages of the ESI atlas. Staff at these organizations contributed a vast amount of information to this effort, including first-hand expertise, publications, maps, and digital data.

At Research Planning, Inc. in Columbia, South Carolina, numerous scientific, GIS, and graphic staff were involved with different phases of the project. Mark White, GIS Director, and Christine Boring, Biology Dept. Manager, were co-Project Managers. The biological data were collected and compiled onto base maps by Lauren Szathmary, Christine Boring, and Jennifer Weaver. Lee Diveley, Katy Beckham, Mark White, and Jeff Dahlin processed and produced the GIS data and metadata. Mark White, Katy Beckham, Jacqueline Michel, Christine Boring, Lauren Szathmary, and Jen Weaver prepared the species profiles. Wendy Early produced the final documents.

#### APPROPRIATE USE OF ATLAS AND DATA

This atlas and the associated database were developed to provide summary information on sensitive natural resources for the purposes of oil and chemical spill planning and response. Although the atlas and database should be very useful for other environmental and natural resource planning purposes, it should not be used in place of data held by any contributing agencies. Likewise, information contained in the atlas and database cannot be used in place of consultations with natural resource agencies, or in place of field surveys. Also, this atlas should not be used for navigation.

## SPECIES LIST

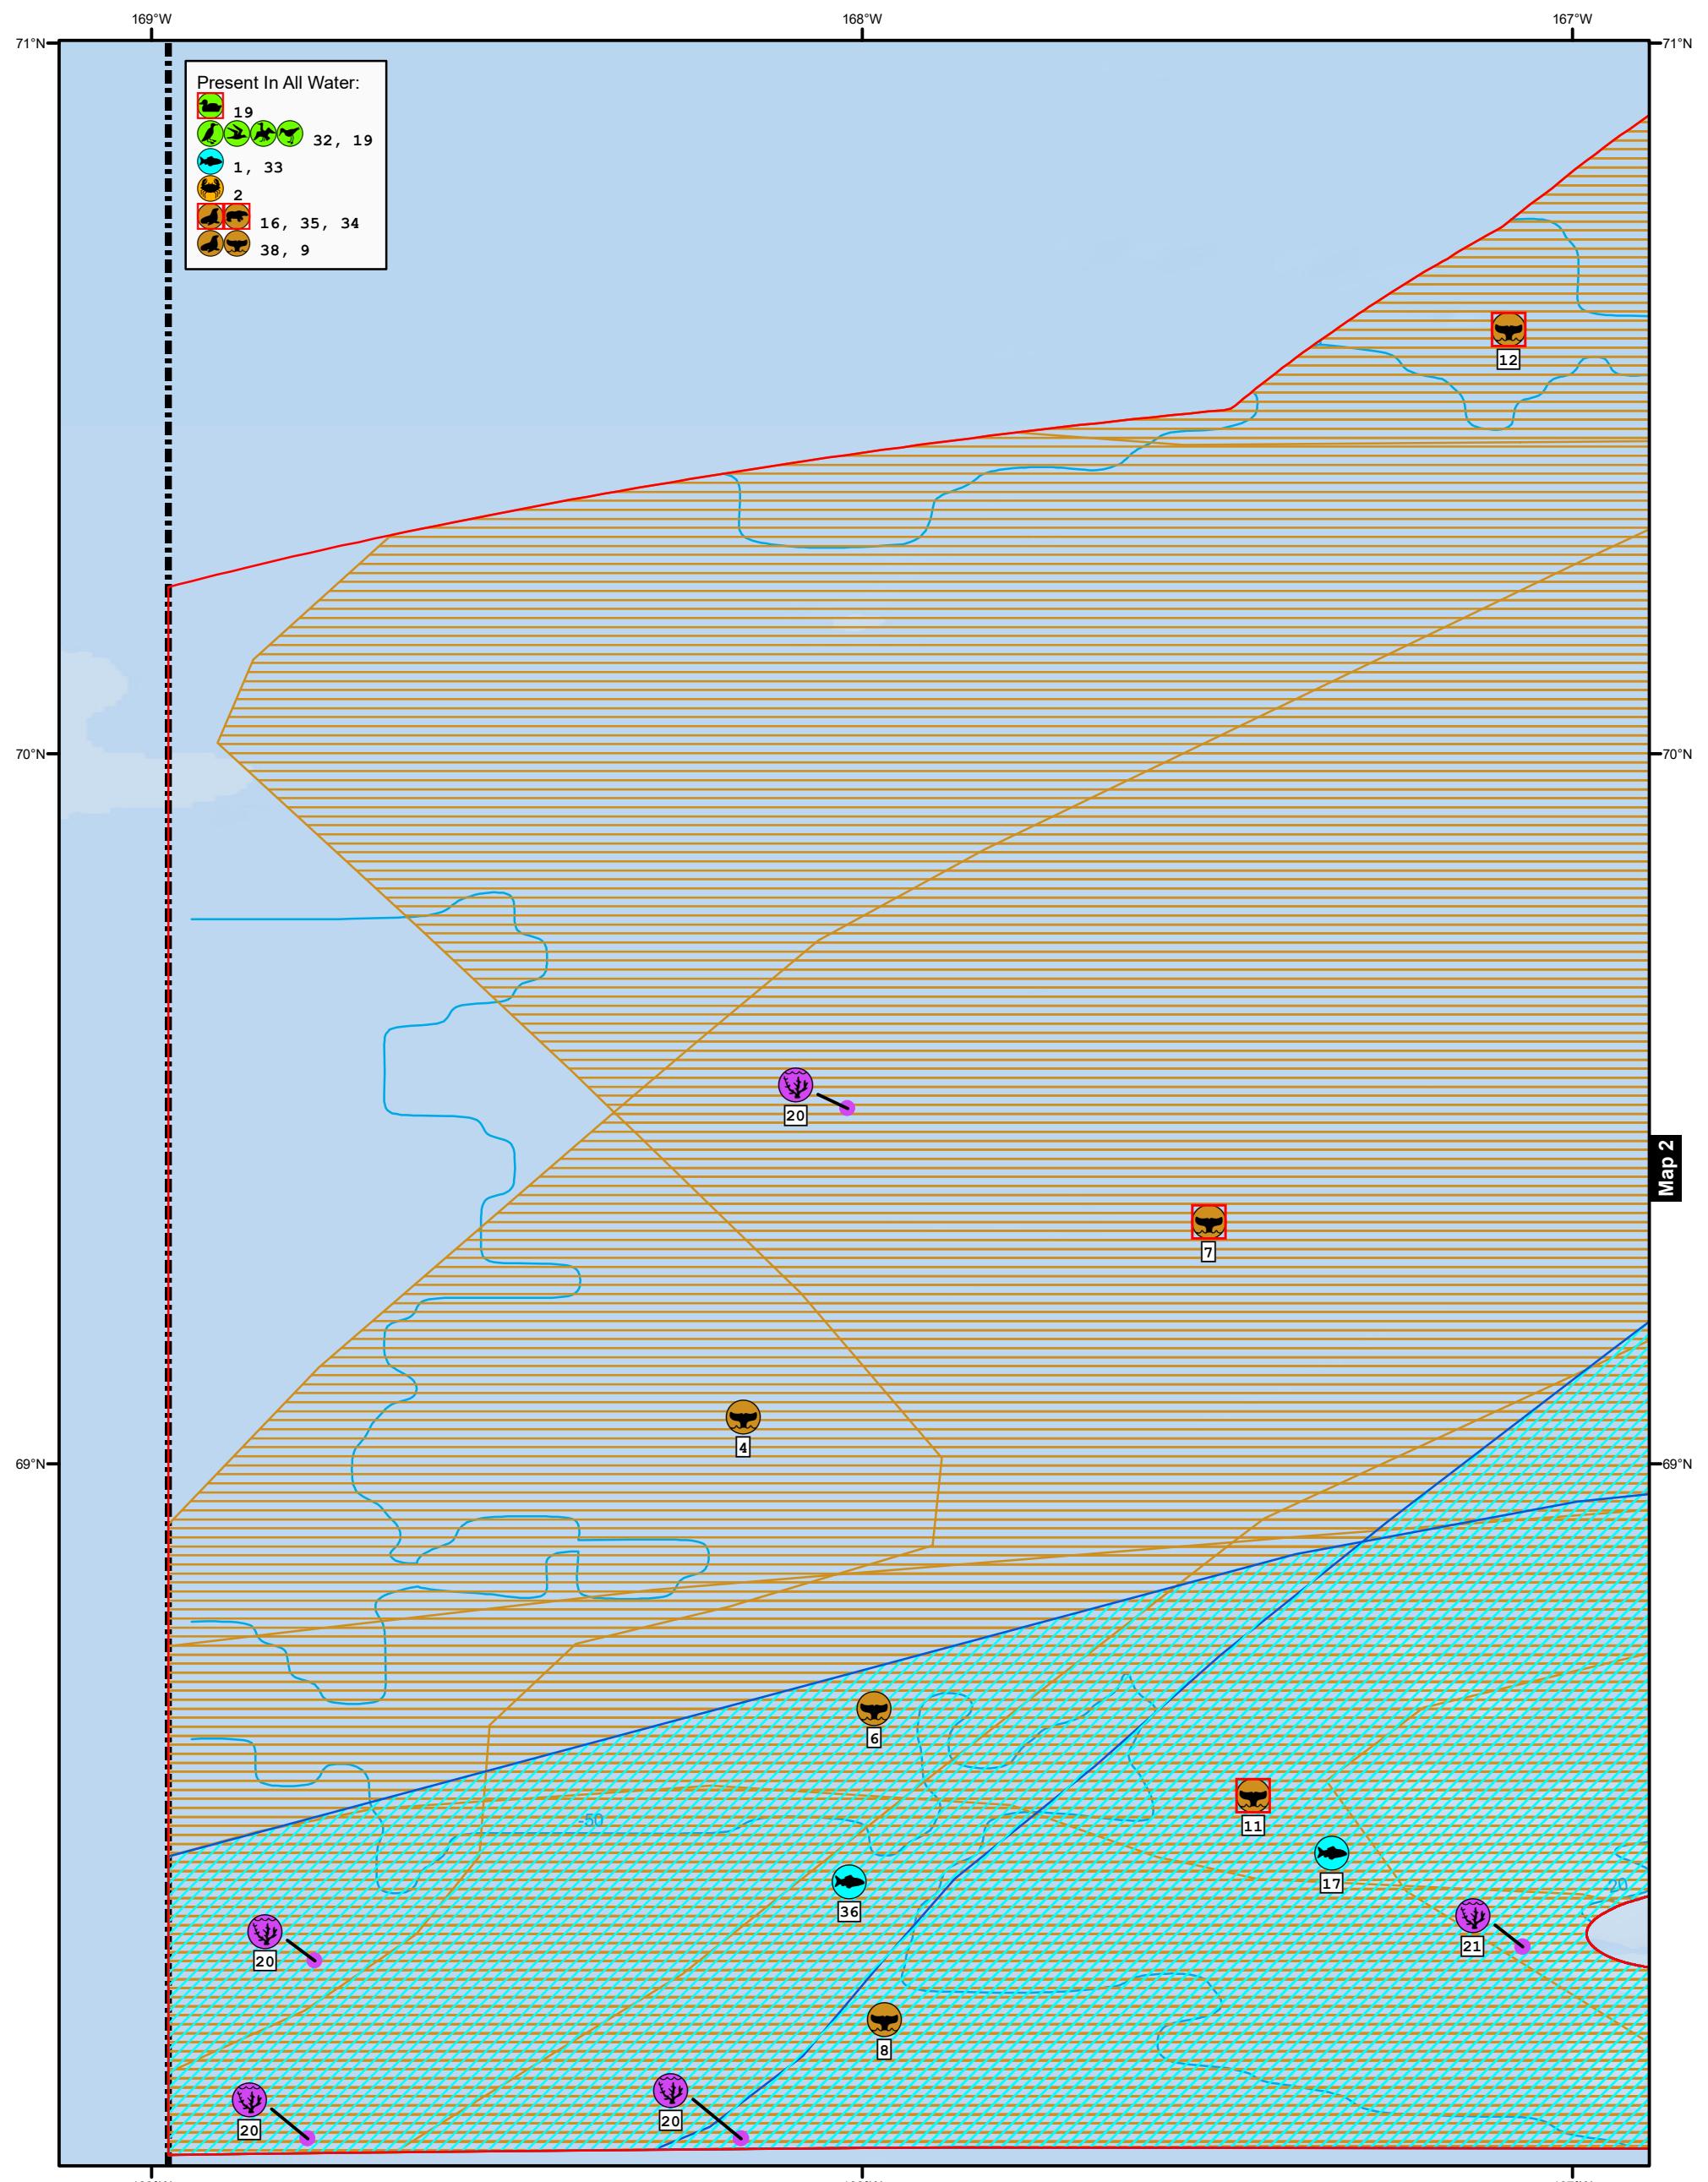

Common Name	Scientific Name	Common Name	Scientific Name
<b>BENTHIC</b>			
<b>ALGAE</b>			
Red algae			
<b>CORAL</b>			
Corals			
Sea pens	<i>Pennatulacea</i>		
Soft coral			
<b>KELP</b>			
Kelp			
<b>REEF</b>			
Deep sea sponge			
Sponges			
<b>BIRDS</b>			
<b>ALCID</b>			
Ancient murrelet	<i>Synthliboramphus antiquus</i>		
Black guillemot	<i>Cephus grylle</i>		
Common murre	<i>Uria aalge</i>		
Crested auklet	<i>Aethia cristatella</i>		
Horned puffin	<i>Fratercula corniculata</i>		
Kittlitz's murrelet	<i>Brachyramphus brevirostris</i>		
Least auklet	<i>Aethia pusilla</i>		
Parakeet auklet	<i>Aethia psittacula</i>		
Thick-billed murre	<i>Uria lomvia</i>		
Tufted puffin	<i>Fratercula cirrhata</i>		
<b>DIVING</b>			
Loons	<i>Gavia spp.</i>		
Pacific loon	<i>Gavia pacifica</i>		
Red-throated loon	<i>Gavia stellata</i>		
<b>GULL_TERN</b>			
Arctic tern	<i>Sterna paradisaea</i>		
Glaucous gull	<i>Larus hyperboreus</i>		
Glaucous-winged gull	<i>Larus glaucescens</i>		
Ivory gull	<i>Pagophila eburnea</i>		
Ross's gull	<i>Rhodostethia rosea</i>		
Sabine's gull	<i>Xema sabini</i>		
<b>PELAGIC</b>			
Black-legged kittiwake	<i>Rissa tridactyla</i>		
Long-tailed jaeger	<i>Stercorarius longicaudus</i>		
Northern fulmar	<i>Fulmarus glacialis</i>		
Parasitic jaeger	<i>Stercorarius parasiticus</i>		
Pomarine jaeger	<i>Stercorarius pomarinus</i>		
Shearwaters			
Short-tailed shearwater	<i>Puffinus tenuirostris</i>		
<b>SHOREBIRD</b>			
Red phalarope	<i>Phalaropus fulicarius</i>		
Red-necked phalarope	<i>Phalaropus lobatus</i>		
<b>WATERFOWL</b>			
Black scoter	<i>Melanitta americana</i>		
Common eider	<i>Somateria mollissima</i>		
Greater scaup	<i>Aythya marila</i>		
King eider	<i>Somateria spectabilis</i>		
Long-tailed duck	<i>Clangula hyemalis</i>		
Northern pintail	<i>Anas acuta</i>		
Red-breasted merganser	<i>Mergus serrator</i>		
<u>Spectacled eider</u>	<i>Somateria fischeri</i>		
<u>Steller's eider</u>	<i>Polysticta stelleri</i>		
Surf scoter	<i>Melanitta perspicillata</i>		
White-winged scoter	<i>Melanitta fusca</i>		
<b>FISH</b>			
Arctic cod	<i>Boreogadus saida</i>		
Bering flounder	<i>Hippoglossoides robustus</i>		
Capelin	<i>Mallotus villosus</i>		
Chum salmon	<i>Oncorhynchus keta</i>		
Greenland halibut (turbot)	<i>Reinhardtius hippoglossoides</i>		
Pacific cod	<i>Gadus macrocephalus</i>		
Pacific herring	<i>Clupea pallasii pallasii</i>		
Pacific sand lance	<i>Ammodytes hexapterus</i>		
Pink salmon	<i>Oncorhynchus gorbuscha</i>		
Saffron cod	<i>Eleotris gracilis</i>		
Walleye pollock	<i>Theragra chalcogramma</i>		
Yellowfin sole	<i>Limanda aspera</i>		

\* Threatened and endangered species are designated by underlining
