| Conditions of Approval<br>1)All operations must be conducted in accordance with the OCS Lands Act (OCSLA), the lease terms and stipulations, the regulations of 30 CFR Part 250, Notices to Lessees and Operators (NTLs), the approved (revised) Application for Permit to Modify (APM/RPM), and any written instructions or orders of the District Manager or their designee.<br>2)A copy of this permit (including all attachments) must be kept on location and made available to inspectors upon request during the permitted operation.<br>3)A revised PE certification is required if:<br>.The plug type changes in any way, including changes in cement properties.<br>.Any plug's base setting depth (even those not required per §250.1715) changes by $\pm 100'$ TVD.<br>.The pressure test changes on any plug.<br>.Less cement is to be pumped.<br>.More cement is to be pumped to isolate a hydrocarbon zone not anticipated in the original permit.<br>.A remedial cement job is required that was not included in the original permit.<br>.Any plug change that causes deviation from the §250.1715 table. You must have a PE certify these changes prior to performing the operations. A revised permit with the PE certification must be submitted to this office within 72 hours.<br>4)While conducting operations, you must have current OSFR coverage for the lease (if applicable). If the lease's OSFR coverage will expire during OCS operations, you must submit an RPM to include the updated OSFR coverage to BSEE prior to the expiration date.<br>5)If well pressures exceed the permitted MASP/SITP pressures:<br>The well control equipment in use must be tested to at least the new observed pressure plus 500 psi.<br>.The appropriate District must be immediately notified of these pressure changes.<br>.An RPM must be submitted to document the change.<br>.If utilizing wireline, the wireline lubricator must be tested to equal or greater than the new observed pressure.<br>6)High-pressure blind shear ram close capability must be available from all BOP control panels. Each panel must be clearly marked to indicate that the accumulator system's high-pressure side is required for closing and shearing the drill pipe with the blind-shear rams. If the high-pressure bypass selector valve is not available at all BOP control panels, the accumulator system must be always set to the high-pressure position, except during pressure and function testing.<br>7)In the event of BOP system failure or leak, you must immediately contact the District Office and receive approval from the District Manager prior to resuming operations. A revised permit will be required to document third-party verification that the BOP is fit for service and will operate under the conditions in which it will be used.<br>8)At the end of this operation, a tree or dry hole tree must be installed and tested for the purpose of monitoring all non-structural casing annuli that are tied back to the surface. |                |                                          |                        |                                       |              |                         |

9) Notify the permitting section at least 72 hours prior to beginning the initial test to allow BSEE representative(s) the opportunity to witness the testing, in accordance with 30 CFR 250.737(d)(2)(ii). If BSEE representative(s) are unable to witness the testing, you must submit the initial test results to the permitting section within 72 hours after completion of the tests.

10) Any casing or annuli that fail a pressure/bubble test must be reported and remediated.

11) Well Activity Reports (WARs) are due no later than noon every Wednesday.

**Correction Narrative**

Our original plan/permit was as stated below

Confining Layers

- Set CIBP below confining layer 1 and set a 400' cement plug above to 2,225'
- Section mill a window in the 7" casing from 1,599-1,653' (across confining layer 4), underream, set an inflatable plug, and leave a cement plug on top of the inflatable bridge plug from 1,125-1,643'

Stub Plug

- Cut and remove the 7" casing at 700', place a cement retainer at 650' and a cement plug above from 500-650'

Surface Plug

- Set a CIBP at 500' and leave a cement plug from 285-500' above it

After interpretation of the cement bond log results, we would like to proceed as follows

Confining Layers

- Set a CIBP below confining layer 1 and perforate across the shale from 2,575-2,645'. Perform a wash and squeeze job across the perfs leaving the top of cement ~2,450'
- Annular isolation across confining layer 4 was sufficient. Therefore, we would like to set a 7" CIBP at 1,683' and leave a cement plug on top of it inside of the 7" casing from 1,125-1,683'

Stub Plug

- This plug will be eliminated due to the TOC in the 7" x 10-3/4" annulus being ~380, and therefore no 7" casing can be cut and pulled

Surface Plug

- Set a CIBP at 700' and leave a cement plug from 285-700' above it

**Permit Primary Type** Abandonment Of Well Bore

**Permit Subtype(s)**

Temporary Abandonment

☐ Proposed or ☐ Completed Work

**Operation Description**

**Procedural Narrative**

For the zonal isolation plug, a 7" cement retainer will be set. Cement will be pumped through, and placed on top of, the retainer. A cement evaluation log will be run to assess

| Application Status Approved |         | Operator 02531 DCOR, L.L.C. |                 |       |       |                  |

the 7" cement integrity.

A CIBP will be set below confining layer 1 and perforations will be performed across the shale from 2,575-2,645'. A wash and squeeze job across the perforations will be performed leaving the top of cement ~2,450'.

A CIBP will be set at 1,683' with cement pumped above it from ~1,125-1,683'.

The cement evaluation log showed that cement behind the 7" casing was as high as 345' indicating that no 7" casing will be able to be cut and pulled. Therefore, the surface plug will consist of a 7" CIBP set @ ~700' with a cement plug above it to ~285'.

At a later date, the conductor, 10-3/4", and 7" (if could not pull) will be cut below the mud line and removed.

Subsurface Safety Valve

Type Installed N/A
