Operation Description

Procedural Narrative
A-30 was TA'd 10/2/17. Now, existing uphole plugs will be drilled out, and the existing zonal isolation plug will be tested. A cement evaluation log will be run to assess the 7" casing and cement, and assess if the top section of 7" casing can be cut & pulled.

Depending on the cement evaluation log, Confining Layer (CL) shales will be isolated by Options: 1) cement plug(s) inside the 7"; or 2) perforating 7", and cement squeezing the annulus across CL(s); or 3) section milling the 7" casing across CL(s), underreaming the interval, and installing an inflatable bridge plug and a cement plug.

A possibility exists of a perf of the 7" and cement squeeze of the annulus at the 10-3/4" casing shoe for additional isolation. If the 7" is cut and pulled, a casing stub cement plug will be installed. If not, additional cement may be placed in the 7" x 10-3/4" annulus if necessary. Lastly a surface cement plug will be placed.
