General Information		
API 043112052800	Approval Dt 22-NOV-2019	Approved By John Kaiser
Submitted Dt 21-NOV-2019	Well Status Temporarily Abandoned	Water Depth 318
Surface Lease P00217	Area LA	Block 6861

Approval Comments

Conditions of Approval:

- 1) All operations must be conducted in accordance with the OCS Lands Act (OCSLA), the lease terms and stipulations, the regulations of 30 CFR Part 250, Notices to Lessees and Operators (NTLs), the approved (revised) Application for Permit to Modify (APM/RPM), and any written instructions or orders of the District Manager.
- 2) A copy of this permit (including all attachments) must be kept on location and made available to inspectors upon request during the permitted operation.
- 3) Any casing or annuli that fails a pressure test or bubble test must be reported to the Permitting section and remediated before proceeding.
- 4) A revised PE certification is needed if (1) the plug type changes in any way including changes in cement properties, (2) any plug's setting depth (even the ones that are not required per 250.1715), changes \pm 100' TVD, (3) the pressure test changes on any plug, (4) less cement is to be pumped, (5) more cement is to be pumped in order to isolate a hydrocarbon zone that was not anticipated in the original permit, (6) a remedial cement job is required that was not included in the original permit, or (7) any plug change that makes you deviate from the §250.1715 table.
- 5) You must have a PE certify these changes prior to these operations being performed. You must submit a revised permit with the PE certification for the revisions to this office within 72 hours.
- 6) All pressure containing equipment must be tested to the approved permitted pressure and recorded on the daily operations report. If well pressures exceed the SITP/MASP stated in the approved permit, the equipment in use must be tested at a minimum to the new observed pressure. The appropriate District must be immediately notified of this pressure change and a RPM submitted to document the change.
- 7) At the end of this operation, a tree or dry hole tree must be installed for the purpose of monitoring all non-structural casing annuli that are tied back to the surface.
- 8) Data must be submitted with the End of Operations Report (EOR) to demonstrate that the fluid left in the hole meets 30 CFR 250.1715(a)9. Corrosion inhibitor and biocide are recommended additives but not required.
- 9) Notify the Permitting Section at Least 24 hours in advance of beginning these approved operations AND of any required BOP tests AND of any plug testing or tagging. You MUST NOT proceed with these operations until an inspector can arrive to witness the testing OR the Permitting Section Chief or his designee waives the witnessing.
- 10) Results of all annuli testing and plug testing must be included with the EOR.
- 11) WAR reports are due no later than noon each Wednesday.

Correction Narrative

11/21/19 - RPM-1: Provide record of Verbal Approval to place BP in 9-5/8" for previously Operational Plug testing. Make note of curative work to be performed on previous placed plug from ~940' - 840'. Remove pulling 9-5/8" and 13-3/8" casing from program due to inability to pull. Change planned plug ~760 to section milled enabled plug.

Permit Primary Type Abandonment Of Well Bore

Revised Permit to Modify (RPM)

Lease P00217		Area LA		Block 6861		Well Name A025		ST 00		BP 00		Type Development	
Application Status Approved				Operator 03539 Beacon West Energy Group, LLC									
Permit Subtype(s) Temporary Abandonment													
Operation Description													
Procedural Narrative Operations procedure provided as attachment.													
Subsurface Safety Valve Type Installed N/A Feet below Mudline Maximum Anticipated Surface Pressure (psi) 593 Shut-In Tubing Pressure (psi) 93													
Rig Information													
Name		Id		Type		ABS Date		Coast Guard Date					
ENSIGN 333 (GRACE)		333		PLATFORM		08-MAY-2019		08-MAY-2019					
Blowout Preventers													
						--- Test Pressure ---							
Preventer		Size		Working Pressure		Low		High					
Rams		13.625		5000		250		3500					
Annular				5000		250		3500					
Wireline				5000				1500					
Date Commencing Work (mm/dd/yyyy) 25-OCT-2019													
Estimated duration of the operation (days) 10													
Verbal Approval Information													
Official								Date (mm/dd/yyyy)					
Questions													
Number		Question				Response		Response Text					
1		Is H2S present in the well? If yes, then comment on the inclusion of a Contingency Plan for this operation.				NO		No H2S reported on well. However, H2s contingency plan in place for platform.					
2		Is this proposed operation the only lease holding activity for the subject lease? If yes, then comment.				NO							
3		Will all wells in the well bay and related production equipment be shut-in when moving on to or off of an offshore platform, or from well to well on the platform? If not, please explain.				YES							
4		Are you downhole commingling two or more reservoirs?				NO

PAPERWORK REDUCTION ACT OF 1995 (PRA) STATEMENT: The PRA (44 U.S.C. 3501 et seq. Requires us to inform you that we collect this information to obtain knowledge of equipment and procedures to be used in drilling operations. MMS uses the information to evaluate and approve or disapprove the adequacy of the equipment and/or procedures to safely perform the proposed drilling operation. Responses are mandatory (43 U.S.C. 1334). Proprietary data are covered under 30 CFR 250.196. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number. Public reporting burden for this form is estimated to average 11/4 hours per response, including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding the burden estimate or any other aspect of this form to the Information Collection Clearance Officer, Mail Stop 4230, Minerals Management Service, 1849 C Street, N.W., Washington, DC 20240.
