17. INVESTIGATION FINDINGS:

At approximately 2230 hours, the Crane Operator (CO) began refueling the starboard crane while the crane was running. The CO went back to the crane cab and forgot about the refueling operation. The CO began offloading a pallet and back-loading boxes onto the Motor Vessel "Damon B. Bankston". Around 2300 hours, the CO noticed that the fuel tank was full according to the fuel gauge in the crane cab and called the Engine Control Room (ECR) to shut off the fuel. After calling the ECR, the CO noticed smoke coming from the crane pedestal. The CO called the Bridge and reported a fire in the starboard crane engine compartment, and the Bridge announced the fire over the PA. Emergency personnel reported to their stations and the crew members reported to their muster areas until the situation was deemed safe and secure. The Fire Teams extinguished the fire using dry chemical extinguishers and firefighting water.

18. LIST THE PROBABLE CAUSE(S) OF ACCIDENT:

During refueling of the starboard crane, the CO returned to the crane cab and forgot about the refueling operation. The diesel filled up the tank and began overflowing. Approximately 15 gallons of fuel overflowed from the tank. All fuel, oil and fire fighting agents were contained within the engine compartment and crane pedestal.
